SUMMARY

Data and Research Analyst with just over three years at Zinnov Management Consulting, working across technology, healthcare, retail, and biotechnology accounts on analytics, secondary research, and BI reporting. Day-to-day work mixes SQL and Python (Pandas, Matplotlib) with Power BI, Tableau, and Advanced Excel — cleaning and validating data, building dashboards, and turning research into decisions for clients including Pfizer, IBM, and Eaton. Rebuilt a recurring-reporting process that cut manual effort by roughly 30%, and workforce insights delivered on a separate engagement helped shorten time-to-fill by 15% on critical roles. More recently, Claude (Anthropic's API, Claude Code, and MCP) has been folded into the workflow to speed up analysis and reporting.

EXPERIENCE

Research Analyst, Data & Business Analytics

Zinnov Management Consulting Jan 2024 – Present | Chennai, India

- Rebuilt the recurring Power BI and Google Analytics reporting process into automated dashboards, cutting manual effort by roughly 30%.
- Dug into large datasets across tech, retail, healthcare, and biotech accounts to pull out market and workforce trends that fed directly into client strategy conversations.
- Used trend and predictive analysis on workforce data to flag emerging job functions early and size up capability gaps before they became a bigger problem for clients.
- Found and fixed inefficiencies in how recurring reports were validated and structured, which improved both turnaround time and data accuracy.
- Brought Claude (Anthropic API, Claude Code, MCP) into the analytics workflow — it's shaved real time off data prep and forecasting.
- Worked closely with senior stakeholders to scope requirements and keep reporting deliverables tied to actual business goals.
- Mentored a team of 7 analysts, tightening up how the team handles quality checks, data validation, and onboarding.

Associate Research Executive

Zinnov Management Consulting Feb 2023 – Dec 2023 | Chennai, India

- Wrote 50+ market intelligence and competitive briefs across healthcare, retail, and tech, mostly built from structured secondary research.
- Pulled research from multiple sources into insight decks that gave stakeholders a clearer read on industry trends and where competitors stood.
- Proposed changes to internal dashboards and KPI structures that

EDUCATION

MBA (Finance)

Annamalai University
2021 – 2023

B.Com

made client reporting easier to act on.

- Handled the administrative side too — SOWs, requirements docs, and coordinating deliverables with clients.

KEY PROJECTS

Role Mapping Center of Excellence – Fortune 500 Clients (Pfizer, IBM, Eaton)

Tools: Advanced Excel | Draup Platform | Predictive Analytics | Secondary Research

- Built out a role mapping framework spanning 150+ job functions, connecting legacy org structures to the technical roles clients were actually hiring for.
- Used predictive market analytics to catch skill volatility trends early; the resulting hiring-strategy shifts cut time-to-fill for critical engineering and R&D roles by 15%.

Job Role Mapping to Draup Platform Taxonomy – Banking Client (NAB)

Tools: Draup Platform | Advanced Excel | Data Validation | Taxonomy Design

- Mapped and validated 150+ client job roles against the platform's role taxonomy, tightening up how workforce data aligned across the board.
- Put together a repeatable mapping framework that standardized reporting and fed into headcount and hiring decisions.

Skills Classification – Emerging, Core & Traditional Skills

Tools: Advanced Excel | Skills Taxonomy | Secondary Research | Benchmarking

- Sorted 500+ skills across client job roles into Emerging, Core, and Traditional buckets, building a taxonomy that actually reflected where the industry was heading.
- Gave L&D and HR teams a way to prioritize upskilling spend based on evidence instead of guesswork.

Skills Gap Analysis – Leading Roles vs. Ahead-of-Transition Roles

Tools: Advanced Excel | Comparative Benchmarking | Data Analysis

- Built benchmarking models comparing role families to pinpoint exactly where capability gaps were widest.
- The resulting gap analysis fed into talent strategy and succession planning conversations.

GenAI Tool & Skills Recommendation Based on Role Workloads

Tools: Claude AI | ChatGPT | Prompt Engineering | Workload Analysis

- Broke down workload and task composition across job roles to spot where GenAI adoption would actually move the needle.
- Delivered a readiness assessment that quantified potential automation gains and fed into the client's AI transformation roadmap.

AWARDS

Go That Extra Mile Award

Zinnov Management Consulting – recognized for exceptional contribution supporting a 15% increase in client satisfaction scores.

FEATURED PROJECT

Skills Architecture & Job Leveling – Aker Solutions

Tools: Advanced Excel | Draup Platform | Skills Taxonomy | Job Architecture | Competency Mapping | Data Validation

- Designed a discipline-wise skills architecture and job architecture framework, mapping engineering roles across band levels (E-K) to core, emerging and digital skills using the Draup Skills Library.
- Defined role responsibilities, band-level job descriptions and competency requirements to standardize job leveling across engineering disciplines.
- Delivered structured, validated Excel workbooks that gave HR and L&D teams a consistent skills taxonomy for workforce planning, talent management and upskilling decisions.
